

- 1 First, create the basic HTML structure with the header, main, and footer elements.
- 2 In the header, add a title (`<h1>`) and a navigation bar containing `<a>` tags for links.
- 3 Inside the main element, create a `<section>` with a welcome message and brief description.
- 4 Add a footer section with a copyright notice using the `<footer>` tag.
- 5 Style the layout with CSS, defining font-family, colors, padding, and aligning text for header, main, and footer sections.
- 6 Implement responsiveness by using a `@media` query to adjust the navigation layout on smaller screen sizes.
- 7 Finally, integrate the CSS styles within the `<style>` tag in the `<head>` section of the HTML document.

```
<!DOCTYPE html>
